Dear Ms. Johansson, Miljödirektör - Chef miljöavdelningen,
Sköne
Dear Mr. Hanak, miljöchef Landskrona
Cc (Till Isabella Lovin via registrator)

Since 2 years, (when we have purchased the current property on Ven in order to place here our botanical garden with the focus on ecology and climate), nothing was done to remove the ensilage plastic mixed with manure left on our ground by the previous owner. The plastic was being accumulated since 20 years as the owner neglected to remove the ensilage plastic after the goats were fed.

We understand the procedural problems but we envisage that the time is ready for the authorities to take action and assign required funds. If not possible we could consider to put up front our funds to clean the property from the contamination but we need financial security to get the money back.

The previous owner who caused this environmental disaster has two building parcels on the island of Ven for sell

<https://www.hemnet.se/bostad/tomt-5rum-ven-landskrona-kommun-preliminart-jons-mollares-vag-8-och-10-14475377>

In order to go forward we will require that the funds acquired from selling of the property are earmarked to secure our investment and that we will be reimbursed for our expenses for the cleaning of the contamination.

The time is running out, the thin ensilage micro-plastic is disintegrating into small pieces and floating into ♦resund.

Yours Sincerely,

Richard Gronvius
